ABSTRACT

This invention relates to a new and distinct everbearing variety of raspberry plant named 'PS-1703'. The new variety is primarily adapted to the growing conditions of the central coast of California and is characterized by the following. Fruit that is uniformly conic in shape, glossy, with drupelets evenly distributed around the berry. Fall fruit production that begins early in July with high July-August yields. Foliage of medium to dark green color, oblique-lobed shape and a length to width ratio that is much longer than broad. Primocanes are medium in length, medium green in color with a medium to strong waxy coat and medium to strong anthocyanins.
